

Digital Solutions & Transformation

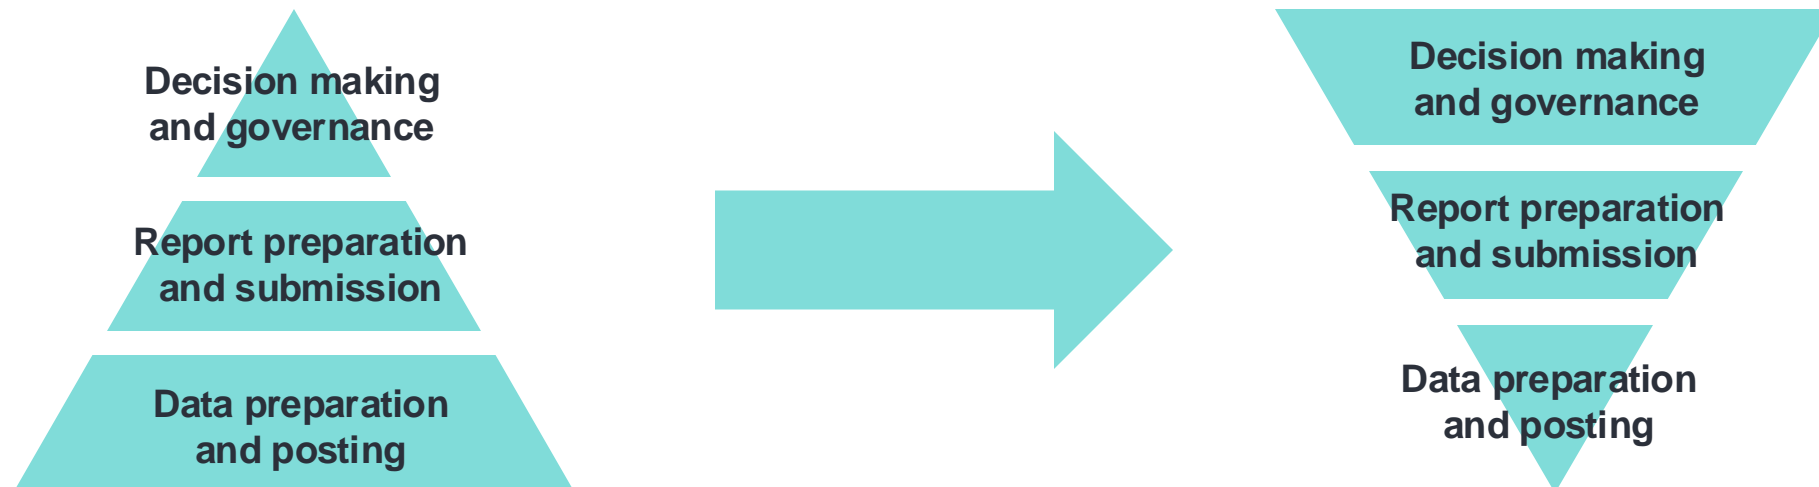

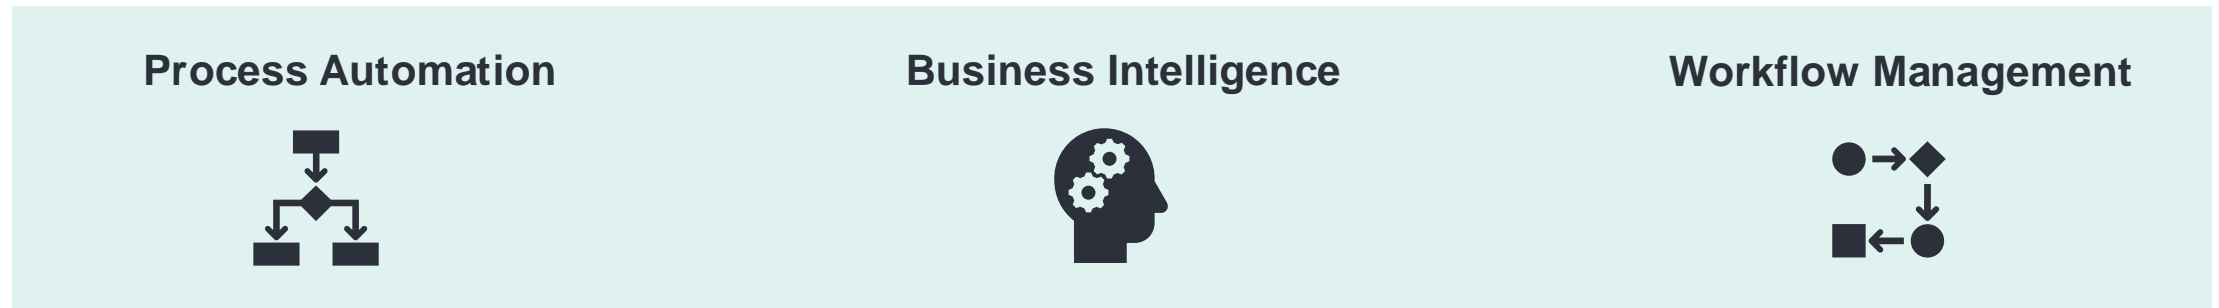

Now, for tomorrow

Modernise your finance operating model

Modern finance function puts more emphasis on informed decision making and planning. By leveraging technology to handle routine and repetitive tasks such as data preparation, reconciliation, and transaction posting, technology will free up more time of the entire finance function to focus more on analysing and interpreting data for decision making offering higher value to the organisation.

Enable technologies you already have

There are varying degrees of digitalisation you can achieve, and the questions often arise are where to start and how much to invest.

Good news is that there are many readily-available and cost-effective technologies that you can use to digitalise a small part of the process in an accelerated manner instead of overhauling the entire end-to-end process.

Starting with a small project can be a low-risk, high-reward approach where you can demonstrate the benefits before moving onto a larger digitalisation initiative.

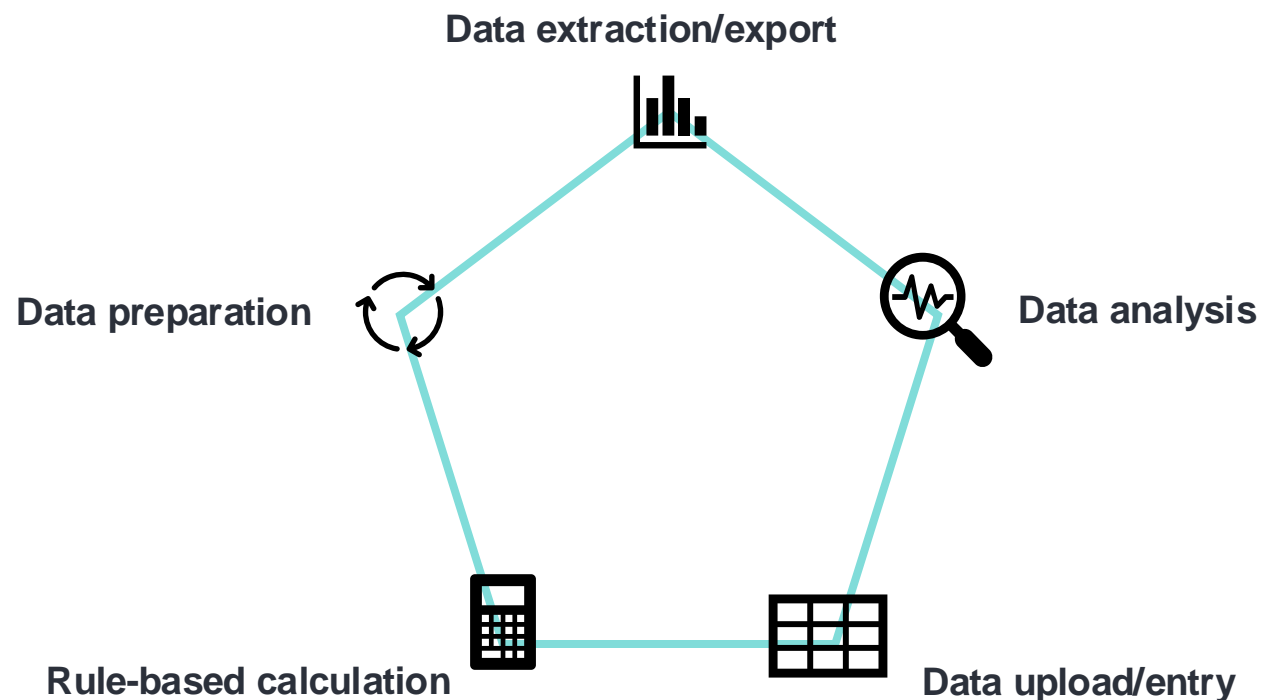

How can we help?

We can help you enable various technologies such as Robotic Process Automation (RPA), Artificial Intelligence (AI) / Machine Learning (ML) in conjunction with data transformation tools to remediate any operational challenges you may have within the finance function, and improve efficiency and accuracy of your processes.

We can also help you enable Business Intelligence (BI) tools in conjunction with data transformation tools to collect, process, and analyse data in a seamless manner so that key business intelligence is always readily available for your decision-making process.

Baker Tilly Digital Solutions and Transformation Practice

Baker Tilly's Digital Solutions and Transformation team is composed of finance professionals equipped with expertise in technology, data, and process. We can help you unlock digital transformation opportunities within your finance function by deploying customised solutions in an accelerated and minimally invasive manner, so they meet your unique requirements, and your existing processes are not significantly impacted.

Our Approach

In resolving your operational challenge, we always start by diagnosing the problem carefully from technology, data, and process perspective. This way, we will be able to design and develop a solution that will cure the root-cause, not the symptom, of the operational challenge. After the solution is developed and deployed, we focus on making continuous improvements to the solution and make it sustainable.
